

How to Set up a Wordpress Blog - Easy to Follow Beginner's Guide

Do you want to create a website? Do you want to build a platform and spread the word out? The easiest way to do it is with a Self-hosted Wordpress.

There're also other free choices like Blogger.com, Wordpress.com, and TypePad.com, but most of the time they come with a lot of limitations.

If you want to own your website and have full control over everything - self-hosted Wordpress blog is the number #1 choice that serious bloggers use.

But I get it. Here's where most people get stuck.

You assume it's too hard for you, you're not tech savvy, you don't know anything about Wordpress and building websites. It's too complicated for you.

That's not right! This is not a rocket science. It's much easier than you think, and in the next few minutes, I'll show you how you can to do it within twenty minutes or less.

Just follow the steps in this step by step tutorial; I'll walk you through the entire process from start to finish.

1. Tools & Apps you need

To set up your first Wordpress blog, you'll need:

1. A domain name (example.com)
2. [Hosting account \(This is where your blog/website is "living"\)](#)
3. Twenty minutes
4. Credit card

Haven't you chosen your domain name yet? Great! I'll show you how to get one for free in step four.

Do you already have a domain name? Don't worry, you just need to go through an extra step (at the end of this tutorial).

2. Choose your domain name

What is a domain name? It's how people will find your website. It's the name of your website.

Don't you have a clue of what you should be using as your domain name?

Don't over-think it. It's not as important as you think. Just use yourname.com. It's fine.

Try to put together two or three memorable words, something catchy.

If the name resonates with what you're going to write about, great!

Just be sure you're not using something difficult to remember or very long name. Shorter is better (in this case).

3. Set up hosting account

This is the place where your website will live. The server in a cloud where you'll get space to install and use your Wordpress blog. It's much easier than it sounds.

You can choose from hundreds (maybe thousands) of different hosting providers. However, [one of the best from my experience is BlueHost](#).

If you're starting out, I believe it's the best option for you due to the following reasons:

Reason #1: Reliability - There's nothing worse than finding out your server crashed and your site is down and not running. I know it from my experience, and it's heart breaking. Hundreds, maybe thousands of visitors went through your site and didn't find your blog. They would probably never come back. That's why you need hundred percent reliable host. Bluehost is!

Reason #2: Customer Experience - As I mentioned, it's not rocket science. [Bluehost is very easy to use](#). You won't believe it after you've subscribed.

Reason #3: Support - We always feel better when someone's willing to help us with every possible step, even if the process is easy. Staffs of Bluehost are operating 24/7 via chat, phone, or email. I've been talking with them many times and their response time is almost immediate.

Reason #4: No Limits - Unlimited domains (you can host as many blogs as you want on one account), unlimited disk space, unlimited bandwidth, unlimited email accounts.

Reason #5: Affordability - You're going to have a hard time finding cheaper and more reliable host than Bluehost. The longer you commit, the cheaper plan you get. Starting at \$2.95 per month.

Reason #6: Wordpress - If you look at Wordpress official website - you're going to find out that they're recommending only three hosting company - [Bluehost is one of them](#).

Reason #7: Values - Bluehost is just for serious people with serious businesses. Do you want to host a porn site? Go to another hosting company, they don't host such kind of websites. Bluehost prohibits adult content.

Not sure if this is the right choice for you? Bluehost specializes in shared servers, 97% of bloggers are using it. They offer 30-day money back guarantee and a free domain name as a bonus.

Now you know all the resources you need. Let's get the ball rolling.

[Go to the Bluehost.com homepage](#) and click on the green button "get started now".

Now is time to decide which plan is right for you. I'd recommend selecting the "Plus plan" because it's the most popular... for a reason! It's only fifty cents more than the starter plan, but you can host unlimited domains(websites) on this account.

select your plan

	starter	plus most popular	business pro
	normally \$5.99 \$3.49* per month	normally \$9.99 \$5.95* per month	normally \$19.99 \$13.95* per month
	select	select	select
websites	1	unlimited	unlimited
website space	100 GB	unlimited	unlimited
bandwidth	unlimited	unlimited	unlimited
included domains	1	1	1
parked domains	5	unlimited	unlimited
sub domains	25	unlimited	unlimited
email accounts	100	unlimited	unlimited
email storage	500 MB per account	unlimited	unlimited
marketing offers	\$50 included	\$200 included	\$200 included
	select	over \$24/yr in extras Global CDN 1 SpamExperts	over \$180/yr in extras 2 SpamExperts 1 SSL

It sounds like a no-brainer, right? I Agree.

No matter what plan you choose, my step by step tutorial will work for you.

Click the **'select'** button.

Now it's time to use a domain name you've chosen before. I'm going to assume you haven't registered a domain name yet using any other domain name provider like Namecheap.com or godaddy.com.

In case you've already bought a domain name, I'll explain what to do in the bonus chapters at the end of this tutorial.

The next step, write your domain name into the left box and click 'next.'

sign up now

Thank you for choosing Bluehost. You have made the right choice in selecting us as your web hosting and eBusiness provider. We provide excellent customer service, reliable hardware and affordable prices.

We appreciate your business and look forward to a great relationship.

The image shows two side-by-side form boxes for domain selection. The left box is titled 'new domain' with the subtitle 'Help me get my free domain!'. It contains a text input field with a cursor, a dropdown menu currently showing '.com', and a 'next' button. Below the input field is the text 'Type your domain name above'. The right box is titled 'i have a domain name' with the subtitle 'I want to signup with my existing domain'. It contains a single text input field and a 'next' button. Below the input field is the text 'Type your domain name above'.

Complete your account information, scroll down and select the plan you've chosen.

The price point is between \$3.95 and \$5.95 (plus package). It all depends on how long commitment you want. The longer you stay, the cheaper the price.

I'd recommend not to sign up for any other services listed below, but it's up to you.

Now is the time to enter your credit card information and confirm that you've read Bluehost's Terms of service.

Click 'next.' After Bluehost verify your payment information - they will offer you some additional features, I'd skip this step.

Click the 'complete' button at the bottom of the page and sit tight. This process can take a few minutes.

When it's done, you will see a welcome message and congratulations message for joining to Bluehost. Then you need to choose your password.

welcome to bluehost

✔ Congratulations!

Your purchase was successful. A confirmation e-mail will be sent to payments@theminimalists.com

choose a password for your account

Before you can login to your account or use your new hosting features, you first need to create a secure password - Please note this password and your hosting payment information, as these are used for account verification purposes when contacting Bluehost support.

[create your password](#)

account information

Domain Name [minimalismhowtostartablog.com](#)
 Business Name [The Minimalists](#)

Remember; use the password generator to create the very strong pass. Then click 'continue.'

Now you've created [your Bluehost account](#).

In the next step, you will be redirected to the login page. Type your password and domain name, click submit, and click on the 'Hosting' link at the top of the page.

The screenshot shows the Bluehost account dashboard for the domain minimalismhowtostartablog.com (shared). The top navigation bar includes links for [hosting](#), [domains](#), [addons](#), [account](#), [cart](#), [help](#), and [logout](#). A secondary menu below it contains [home](#), [cpanel](#), [server](#), [email](#), [website](#), [ftp](#), [databases](#), [manage ips](#), and [install scripts](#).

The main content area is divided into several sections:

- helpful resources:** A row of icons for [Getting Started](#), [Help Center](#), [Change Passwords](#), [Update Billing Info](#), [Renew Account](#), and [Change Settings](#).
- marketing:** A row of icons for [SoloSEO](#), [Constant Contact](#), [Google AdWords \\$100](#), and [Bing Yahoo \\$100](#).
- email:** A row of icons for [Email Manager](#), [Check Webmail](#), [Free Anti-spam](#), [Premium Anti-spam](#), and [Google Apps](#).

On the left side, there are promotional banners for [Google Apps for Work](#) (available now) and [Tapp in. Business on Tapp](#) (a breakthrough FREE resource for small business, backed by Bluehost).

You're all set. Now you've successfully registered for Bluehost hosting account.

4. Install Wordpress

Now you're actually a few steps from getting your website live. You should be at the Control panel right now (C-panel).

Don't worry, even if you see a lot of buttons, it's really easy. It was a nightmare a few years ago, but Bluehost made it amazingly simple.

Scroll down until you see 'website section' and click on the '**install now**' under Wordpress and sit tight. It may take a few minutes.

On the next screen, under 'do it yourself' click '**install**' and check your domain.

Accept the "Admin Username" and "Admin Password."

Click on the checkbox of Agree with terms and condition and click on the '**install now**' button.

Again, be patient and wait until the installation is complete.

If the Bluehost offer another upsell, decline.

It's done! You just completed the most difficult part of the process! On the screen, you will see your Blog URL, Login URL, username and password. Take a screenshot and save it to your computer! Just as a backup.

Now the fun part begins...

5. Log inside Wordpress

Now, click on "**Admin URL**." There is your login page, bookmark it!

You'll use this page as often as possible, so it's a good idea to do it.

Now it's time to enter your password from the previous step (be sure to back this information in a .txt file on your computer!) and YOU'RE IN! - Really exciting, right?

CONGRATULATIONS! You've successfully set up your first website!

After you log inside, you will see your base or Wordpress dashboard. This is the place where you can manage everything regarding your Wordpress blog.

You may see a welcome screen offering you some kind of plugin, maybe Jetpack. Don't worry about that and decline.

6. Setting up your first page & post and publishing

Find Posts or Pages on the left-hand side and click "Add new." Now you can see the new page screen (the process for setting up post and page is exactly the same!)

Type in the title of your first post, something like "Yes, I got it, awesome!" (Clever, right?)

Don't worry, this is just a test, you can always change it and post as many posts and pages as you want.

Now it's time to write your first page and post.

Tip: You can write about what you're going to do, what your readers are going to receive in the future, how many times per week/month you're going to publish, info about you, etc...

The time is now, click on the "Publish" and your first page/post is live ready for the world to see it!

Congratulations for the second time! You've set up your first page on your new site. (Quite easy, right?)

7. Choose a design (theme)

Setting up a website is one thing, but the final design totally different.

Even though there are maybe a thousands of free Wordpress themes (Click "**themes**" under "**appearance**" on the left-hand side menu), I'd recommend spending a few bucks and buy a premium theme.

Simply because you'll be seen as more serious and when it comes to solving some kind of a problem with your design, with premium theme you have premium support.

[Studio Press offers almost hundred nice looking and very well optimized Wordpress themes](#), I'd suggest you start there.

8. Check out how it looks

Just click on the "**view post**" link at the right or under the home image at the top of the page.

As you can see, there is nothing fancy, just ordinary Wordpress theme. But that's what I love about Wordpress. There are literally thousands of different themes you can start using right away.

As I said in the previous step, [I'd recommend checking out StudioPress](#).

9. Optional - If you have already registered a domain name

But what should I do if I have registered a domain from another provider? No big deal, I'll show within a minute.

First step, you have to point your domain name (yoursite.com) to the Bluehost nameservers. Whatever provider you're using, it's almost the same process all the time. Bluehost offers great tutorial how to do it here.

For example, if you're using namecheap.com, you log in, find your domain name and click **manage** at the right.

Then scroll down and under nameservers click **+add nameservers**.

And type in your nameservers:

- Enter ns1.Bluehost.com in the field for Nameserver 1.
- Enter ns2.Bluehost.com in the field for Nameserver 2.

Click OK, and that's it. You can log out, it's all done. Now sit tight. The change can take up to 48 hours. If you get lucky enough, it takes 1-2 hours.

Once the nameservers are changed, you can set up your Wordpress blog.

Second step, after you've signed up, enter your domain name.

Click next, and all following steps are the same. If you get stuck, shoot me an email or contact Bluehost support, they'll be happy to help you.

10. Optional - Learn more about Wordpress

Do you want to learn more about Wordpress on your own? [I'd suggest visiting WP101.com](http://WP101.com). There're a hundreds of videos with step by step tutorials how to do almost anything in Wordpress.
